1 Introduction

This unaudited quarterly regulatory disclosure complies with the Banking (Disclosure) Rules (“Rules”) under section 60A of the Banking Ordinance and the Financial Institutions (Resolution) (Loss-absorbing Capacity Requirements - Banking Sector) Rules (“LAC Rules”) under section 19(1) of the Financial Institutions (Resolution) Ordinance (“FIRO”).

References to “the Group” within this document means Standard Chartered Bank (Hong Kong) Limited (“the Bank”) and its subsidiaries.

These banking disclosures are governed by the Bank’s disclosure policy, which has been approved by the Board of Directors. The disclosure policy sets out the approach to determine the content, appropriateness and frequency of the disclosures, the approach to ensure the relevance and adequacy of the disclosures, and the internal control over the process for making the disclosures. The disclosures have been subject to independent review in accordance to the disclosure policy.

According to the Rules and the LAC Rules, disclosure of comparative information is not required unless otherwise specified in the standard disclosure templates. Prior period disclosures can be found in the Regulatory Disclosure section of our website, www.sc.com/hk.

Basis of preparation

The consolidated capital ratios were calculated in accordance with the Banking (Capital) Rules of the Hong Kong Banking Ordinance. The basis and scope of consolidation for regulatory purposes is different from the basis and scope of consolidation for accounting purposes.

The Group uses the advanced internal ratings based (“IRB”) approach for both the measurement of credit risk capital requirements and the management of credit risk for the majority of its portfolios. The Group also uses the standardized (credit risk) approach for certain insignificant portfolios exempted from IRB. The Group adopts the securitization-external rating based approach (“SEC-ERBA”) to calculate its credit risk for securitization exposures.

For market risk, the Group uses a stochastic asset-liability model approach for two guaranteed retirement funds and the standardized (market risk) approach for other exposures. In addition, the Group adopts the standardized (operational risk) approach for operational risk.

Loss-absorbing Capacity Disclosures

Hong Kong LAC Rules came into operation on 14 December 2018. Following classification by the HKMA (as resolution authority), in scope entities are required under these rules to issue LAC instruments that can be written down or converted in the event of failure, and maintain minimum LAC resources.

The Group was notified by HKMA of its classification as a material subsidiary under the LAC rules with effect from 1 April 2019, with Standard Chartered PLC (“SC PLC”) as the non-HK resolution entity. Following this classification, the Group has met its minimum LAC requirements since 1 July 2019, and is now publishing LAC disclosures for the period ended 30 September 2020. The basis of calculating the Group’s LAC and RWAs is in accordance with the LAC Rules, with disclosures made using standard templates issued by the HKMA on 31 October 2019.

The Group’s LAC disclosures are included as part of this regulatory disclosure, while SC PLC’s LAC disclosures are included as part of its disclosures which can be found in the Investors section of SC PLC’s website, <https://www.sc.com>.

6 Liquidity Coverage Ratio – for category 1 institution (LIQ1) (continued)

Key Drivers

Liquidity Coverage Ratio (LCR) measures the short-term resilience of the Group's liquidity risk profile, and is sensitive to balance sheet movement and composition. The Group has maintained a strong liquidity position and well above the regulatory requirement of 100% throughout Q3 of 2020 in spite of the challenging environment. The quarterly average of LCR was 165% for the quarter ending 30 September 2020 (30 June 2020: 156%), mainly as a result of increase in average deposits and consequently higher HQLA, thereby having a positive impact on our LCR position.

Composition of High Quality Liquid Asset ("HQLA")

The Group holds significant levels of high quality unencumbered liquid assets that can be liquefied, repo-ed or used as collateral in the event of a liquidity stress.

The liquid assets consist predominately of Level 1 assets, including mainly cash and central bank reserves, Hong Kong exchange fund bills and notes, US treasuries and other marketable debt securities issued or guaranteed by other central banks and governments. In addition, the Group also holds level 2 assets such as high quality covered bonds, corporate bonds and bonds issued by public sector entities.

Concentration of Funding Sources

Our assets are primarily funded by customer deposits, largely made up of low cost and stable current and savings accounts. This forms a stable base for the Group's funding requirement. In addition, wholesale funding is widely diversified by client type and maturity which helps managing liquidity mismatches as required. The Group has various internal quantitative limits and metrics in place to monitor deposit concentrations, as well as HQLA Issuer concentrations.

The Regional Asset and Liability Management Committee ("RALCO") and the Country Asset and Liability Management Committee ("ALCO") monitor trends in the balance sheet and ensure that any concerns that might impact the stability of deposits are addressed in an effective and timely manner. RALCO and ALCO also review balance sheet plans to ensure that projected asset growth is matched by growth in customer deposits.

Derivatives Exposure

The use of derivatives for hedging and sale to customers as risk management products is an important part of the Group's business activities. These instruments are also used to manage the Group's own exposures to market risk. The principal derivative instruments used by the Group are foreign exchange related and interest rate related contracts. Derivative positions are mark-to-market on a daily basis.

6 Liquidity Coverage Ratio – for category 1 institution (LIQ1) (continued)

Currency Mismatch on LCR

Customer assets are as far as possible funded in the same currency. Where mismatches arise, they are controlled by limits on the amount of foreign currency that can be swapped to local currency and vice versa. Such limits are therefore a means of controlling reliance on foreign exchange markets, which minimizes the risk that obligations could not be met in the required currency in the event that access to foreign exchange markets becomes restricted.

Majority of the Group's customer deposits are denominated in HKD, USD, CNY and KRW. The Group holds higher USD denominated HQLA due to its significant market depth and ease of conversion in the event of liquidity stress. This is in line with the Alternative Liquidity Approach option prescribed by HKMA. During this period, the Group maintained an amount of HKD-denominated level 1 assets well above the regulatory requirement of 20% of its HKD-denominated total net cash outflows.

Liquidity management

Treasury-Markets is responsible for managing the Group's liquidity position within the approved liquidity and funding risk limits and thresholds. Oversight under the liquidity and funding framework resides with RALCO and ALCO, supported by Treasury-Markets. RALCO and ALCO also ensure the Group remains in compliance with liquidity policies and practices, as well as local regulatory requirements.

It is the Group's policy to manage liquidity without presumption of the Group's parent support. RALCO and ALCO are responsible for ensuring that the Group is able to maintain adequate liquidity at all times and be in a position to meet all obligations as they fall due; repay depositors and fulfil all commitments to lend.

7 RWA flow statements of credit risk exposures under IRB approach (CR8)

The following table sets out a flow statement explaining variations in the RWA for credit risk determined under the IRB approach.

	(a) Amount HK\$'M
1 RWA as at end of previous reporting period (30 June 2020)	540,090
2 Asset size	24,600
3 Asset quality	4,158
4 Model updates	–
5 Methodology and policy	–
6 Acquisitions and disposals	–
7 Foreign exchange movements	5,157
8 Other	–
9 RWA as at end of reporting period (30 September 2020)	574,005

RWA increase from asset size was driven by the customer loan growth during the period. RWA increase from asset quality was mainly due to credit migration during the period.

RWA increase from foreign exchange movements were mainly due to appreciation of CNY and KRW.

8 Market risk exposures on guaranteed retirement funds

The capital requirement for the Group's guaranteed retirement funds is calculated based on the potential shortfall between the estimated returns from the funds and the guaranteed returns. The projected returns are estimated using a simulation approach with a 99% confidence level. The model is back-tested against actual results. As of 30 September 2020, the accounting provisions exceed the potential shortfalls, hence there are no additional capital requirements.
